

In our Pedal set You find 60, 70 and 80 Shore Elastomers. They give You a wide range of adjustments from an Streetcarish, to an Racecarish Brake feel. This guide will give You some Brake configuration examples and will help You to understand the limits of each elastomer, based on the maximal pedal effort what they can handle. Each elastomers has its own limits and if they are constantly overstress, they will fail by time.

25mm 60# Soft Elastomer
Highest Brake force adjusting Poti setting is: 7 o'clock (minimum)

20mm 60# Soft Elastomer
Highest Brake force adjusting Poti setting is: 10 o'clock (moderate)

15mm 60# Soft Elastomer
Highest Brake force adjusting Poti setting is: 12 o'clock (medium)

10mm 60# Soft Elastomer
Highest Brake force adjusting Poti setting is: 4 o'clock (very high)

25mm 70# Medium Elastomer
Highest Brake force adjusting Poti setting is: 9 o'clock (low)

20mm 70# Medium Elastomer
Highest Brake force adjusting Poti setting is: 12 o'clock (medium)

15mm 70# Medium Elastomer
Highest Brake force adjusting Poti setting is: 3 o'clock (high)

10mm 70# Medium Elastomer
Highest Brake force adjusting Poti setting is: 5 o'clock (maximum)

25mm 80# Hard Elastomer
Highest Brake force adjusting Poti setting is: 12 o'clock (medium)

20mm 80# Hard Elastomer
Highest Brake force adjusting Poti setting is: 2 o'clock (medium high)

15mm 80# Hard Elastomer
Highest Brake force adjusting Poti setting is: 5 o'clock (maximum)

10mm 80# Hard Elastomer
Highest Brake force adjusting Poti setting is: 5 o'clock (maximum)

Streetcarish Brake feel

This is Our Factory setting, it is installed on Your pedal when You receive it. It give You an soft, "Streetcarish" Brake feel. Highest Brake force adjusting Poti setting is: 10 o'clock (moderate)
